Technical task for - React Developer

Lets create react app like https://gaana.com/

You can use following API

 API URL => https://itunes.apple.com/search?term=a&offset=25&limit=25

1. Term = term you want to search
2. offset = page number (optional)
3. limit = song item limit (optional)

This API to load songs there are images URL, Songs URL , banner images in response you can find out by seeing response payload.

If you want to load all random song initially then you can just use this API

API URL => https://itunes.apple.com/search?term=""

This app should have

1. Login Page
2. Homepage with
   a. Header with search bar
   b. Song list with images of song (try to copy ui of gaana.com)
   c. Modal with playing song the song is selected (optional)
3. Logout
